DETAILED ACTION

Drawings

1. This application has been filed with informal drawings, which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1, 8-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Taki (US Patent 6, 111, 909).

(1) With regard to claim 1, Taki discloses a method of generating a cyclic sequence of frequencies, the comprising: selecting a number of frequencies in succession from a list of usable frequencies (col. 13, lines 5-11) by means of a sequence of indices indicating respective positions in the list, deriving said sequence of indices from a kernel (col. 10, lines 27-44), controlling a frequency generator arrangement to repeatedly generate the succession of frequencies so selected (col. 10, lines 27-44; col. 11, line 65-col. 12, line 27)), and updating the list in respect of the frequencies it contains between successive selections of a frequency therefrom, the detail of each updating being dependent upon the part of the succession of frequencies so far selected (col. 35, lines 12-16).

(2) With regard to claim 8, claim 8 inherits the limitations of claim 1 as claim 8 only discloses an apparatus for implementing the method of claim 1. Furthermore Taki discloses an apparatus for the method in Fig. 2.

(3) With regard to claim 9, Taki also discloses a radio communication system, which employs frequency hop sequences generated by the method as claimed in claim 1 (abstract).

(4) With regard to claim 10, Taki also discloses a radio communication system which includes apparatus as claimed in claim 8 for generating a frequency hop sequence.

Allowable Subject Matter

4. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
